

Dr. Ryan N Cole, MD MEDIA KIT

Dr. Ryan Cole, CEO and Medical Director of Cole Diagnostics, serves clinicians throughout Idaho and the nation with expert pathology diagnoses and patient-centered care. Dr. Cole completed his residency in Anatomic and Clinical Pathology at the Mayo Clinic, where he was chief fellow during his surgical pathology fellowship. This fellowship was followed by a year as chief fellow at the Ackerman Academy of Dermatopathology in New York City, under the direction of world-renowned dermatopathologist, the late A. Bernard Ackerman.

Dr. Cole's philosophy centers on putting the patient first in every diagnosis. He recognizes that the clinician needs definitive answers to best treat the patient. Having seen over half a million pathology cases in his practice, Dr. Cole is uniquely suited to provide answers quickly and accurately. He is licensed in 12 states and serves patients from Maine to California.

Cole Diagnostics, founded in 2004, is one of the largest independent laboratories in Idaho, and has grown from a boutique dermatopathology practice to a full service Anatomic and Clinical pathology laboratory. This lab has an extensive menu of testing capabilities including molecular testing, microbiology, clinical laboratory blood testing, and cytology, along with outpatient surgical biopsies. Dr. Cole has helped perform and diagnose over 100,000 Covid tests this past year.

When Dr. Cole is not behind the microscope or pipetting covid PCR specimens, he enjoys creating one of a kind functional works of gallery art such as tables, bowls, and pens using reclaimed Idaho urban timber. He also spends time working on his organic farm near Boise, Idaho.
